New tankyrase2 polypeptides, useful for treating conditions mediated poly(adenosine diphosphate-ribose) polymerase activity e.g. cancers, inflammatory and autoimmune disorders.

The present invention provides the protein and coding sequence for the human tankyrase2 protein. This is found in two different versions, designated TANK2-LONG and TANK2-SHORT. Tankyrase2 has polyADP-

The specification describes a method for identifying a candidate adenomatous polyposis coli protein (APC) and axin pathways modulating agents. The method comprises providing an assay system comprising the assay system comprising the assay system with a test agent under conditions where, except for the presence of the test agent, the system provides a reference activity, and detecting a test agent-biased activity of the assay system, where a difference between the test agent-biased activity and the reference activity identifies the test agent-biased activity and the reference activity identifies the test agent as a candidate APC and axin pathways modulating agent. The method is useful in identifying a candidate adenomatous polyposis coli protein (APC) and a pathways modulating agent, which are useful for preparing a composition for diagnosing or treating cancer. The present sequence encodes a human orthologue of a cancerbabditis elegans MAPCAX polypeptide. The sequence was identified
                                                                                                                                                                                                                                                                                                                                                                                                                                                      Identifying a candidate adenomatous polyposis coli protein (APC) and axin pathways modulating agent for treating cancer by contacting an assay system comprising a modifier of APC and axin polypeptide or nucleic acid with a test agent.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        216
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    120

```
This invention describes novel cytostatic polynucleotide and polypeptide sequences which can be used in a method for diagnosis is based on the risk of developing prostatic cancer. Diagnosis is based on determining over transcription or cancer. Diagnosis is based on determining over transcription or over expression of the sequences in prostatic tissue. Screening for inhibitors of the sequences or detection substances involves a binding assay, any compounds that bind are selected, optionally after deconvolution of mixtures. Detection of a predetermined minimum level of the reporter indicates the presence of tumour cells. Inhibitors can be chosen from antisense oligonucleotides, short-interfering RNA or ribozymes; an organic molecule of molecular weight below 5000, preferably 300, that binds to the polypeptide; an optime polypeptide, preferably humanised or human; an anti-idiotype, non-human (moncolonal) antibody directed against Ab or any of the above derivatised with a reporter group, cell toxin, immunostimulatory molecules and/or radioisotope. The polymucleotides are identified in human prostatic cancer by differential expression analysis, using NNA microstrays,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               between normal and tumorous tissues, with (over) expression being detected by quantitative PGR. Analysis of prostatic cancer aamples showed that CD24 was upregulated in many of them. Sections of tissue, isolated from prostatic cancer patients, or subjects at risk, were incubated
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Rosenthal A, Hermann K, Pilarsky C, Specht T;

sequentially with anti-human CD4 murine monoclonal antibodies; biotinylated second antibody; streptavidin-conjugated horseradish peroxidase and then diaminobenzidine as colour former (brown). The samples were counterstained with hemalum (blue). Malignant cells stained atrongly but non-malignant cells only weakly. In 15 of 63 samples of adenocarcinoma, membrane and cytoplasmic staining was very strong, and lymph node metastases were also stained. ADR65805-ADR6554 represent the polymucleotide and polypeptide sequences used in the method of the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              This invention describes novel cytostatic polynucleotide and polypeptide sequences which can be used in a method for diagnosing prostatic cancer. Cor the risk of developing prostatic cancer. Diagnosis is based on determining over transcription or over expression of the sequences in prostatic tissue. Screening for inhibitors of the sequences or detection substances involves a binding assay, any compounds that bind are selected, optionally after deconvolution of mixtures. Detection of a predetermined minimum level of the reporter indicates the presence of tumour cells. Inhibitors can be chosen from antisense oligonucleotides, short-interfering RNA or ribozymes; an organic molecule of molecular weight below 5000, preferably 300, that binds to the polypeptide; an aptamer against the polypeptide; a (monoclonal) antibody (Ab) against the colypeptide, preferably humanised or human; an anti-idotype, non-human or monoclonal) antibody directed against Ab or any of the above derivatised with a reporter group, cell toxin, immunostimulatory molecules and/or canocin projectope. The polymulacidides are identified in human prostratic cancer by differential expression analysis, using DNA microarrays, between normal and tumorous tissues, with (over) expression being detected by quantitative PCR. Analysis of prostatic cancer samples showed that CD24 was upregulated in many of them. Sections of tissue, isolated from prostatic cancer patients, or subjects at risk, were incubated concerpation of the antibody, atreptavidin-conjugated horseradish beroad antibody, streptavidin-conjugated horseradish concerpations and then diaminobenzidine as colour former (brown). The samples were counterstained with hemalum (blue) and samples very strong, and lymph node metastases were also stained. ADR65805-ADR66954 represent the confusional and cytoplasmic staining was very strong, and lymph node metastases were also stained. ADR65805-ADR66954 represent the horseral procession and cytoplasmic staining was very strong, and horseradical and polypeptid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   CCCTGAGCGCGTCTTCTCCGGGGGGCCTCCTCCTCCTCGCGGGGCCGGGGCTCCTGC 180

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to the use of an agent that inhibits the activity of an enzyme that mediates repair of a DNA strand break in the manufacture of a medicament for the treatment of diseases caused by a defect in a gene that mediates homologous recombination (HR). The use is for the treatment of cancer, preferably lung, colon, pancreatic, gastric, ovarian, cervical, breast and probtate cancer. The cancreatic, gastric, and is gene-linked hereditary cancer. The cancer is specifically breast cancer, where the cancer cells to be treated are defective in BRCA1 or BRCA2 expression, and are partially or totally deficient in BRCA1 and/or BRCA2 expression. The gene that mediates HR is a tumor suppressor gene that is BRCA1 or BRCA2. The PARP inhibitor is useful in the manufacture cancer cells, where the cancer calls defective cells that are cancer cells defective in HR are partially or totally deficient in HR. The present sequence represents human tankyrase
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       A poly(ADP-ribosyl)ation polymerase (PARP) inhibitor of activity of an enzyme that mediates repair of a DNA strand break, useful in treating diseases with gene defects on homologous recombination.

This invention relates to novel tricyclic lactam indole and benzimidazole compounds that inhibit the activity of polyadenosine diphosphate (ADP)-
compounds that inhibit the activity of polyadenosine diphosphate (ADP)-
compounds that inhibit the activity of polyadenosine diphosphate (ADP)-
compound to a gene encoding a great a genetic defect
compound (HR), cancer i.e. a gene-linked hereditary cancer such as where the cancer cells are partially or totally deficient in BRCA1 and/or BRCA2 expression and to induce apoptosis in HR defective cells. The present invention describes this method as a stand alone therapy that conventional radiotherapy or chemcherapy treatments, avoiding the conventional radiotherapy or chemcherapy treatments, avoiding the effects. Furthermore, only low doses of these compounds need to be used hence reducing systemic build up and minimizing toxic effects. Accordingly, such compositions exhibit cytostatic activity and compositions as PARP inhibitors. This polynucleotide sequence is the DNA sequence of human tankyrase-2 mRNA, given in an exemplification of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          696 TAGTCAATCTCCTTTTGCGACATGGTGCAGACCCCAATGCTCGAGATAATTGGAATTATA 755

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Diagnosing colon cancer in a subject comprises identifying colon cancer-
associated polypeptides as antigens that elicit immune response in colon
cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              63
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to a method for diagnosing colon cancer in a subject which comprises identifying colon cancer-associated polypeptides as antigens that elicit immune response in colon cancer. The method is useful for diagnosing, determining onset, progression, or regression of colon cancer in a subject, or for selecting a course of treatment of a subject having or suspected of having colon cancer. The colon cancer, and for following the course of treatment of cancer, and for following the course of treatment of colon cancer, and for following the course of treatment of colon cancer is human colon cancer-associated polypeptide gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         derrecridececretricerdecededededececedenterrerededececedede
